Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: The combination requires a compressor containing a compressor element and comprising a rotor chamber connected to inlet and outlet piping, a reservoir connected to the outlet pipe, and a pressure regulating inlet valve connected to the inlet pipe, a movable piston disposed within a cylinder that is connected to the inlet valve to open and close the valve without the use of a spring acting thereon, a bridge between the inlet pipe and the rotor chamber bridging said inlet valve, and in which are successively mounted a gas stream limiter and a non-return valve which only admits gas into the rotor chamber; a gas pipe connecting the reservoir to a part of the bridge situated between the gas stream limiter and the non-return valve; and a relief valve associated with the gas pipe, wherein the piston is a double-acting piston which divides the cylinder into first and second closed cylinder chambers; the first cylinder chamber, on a first side of the piston facing away from the inlet valve, is connected to a part of the rotor chamber located near the inlet valve upstream the rotor chamber via a first pipe, wherein the connection is always open; and on a second side of the piston, the second cylinder chamber is connected to a part of the rotor chamber situated near the inlet valve and to the non-return valve via a second pipe. The prior art fails to disclose this combination of structural features or any obvious variants thereof. Particularly, no prior art documents appear to disclose Applicant's spring-less piston motion, wherein the first cylinder chamber within the inlet valve is connected to a portion of the rotor chamber located near the inlet valve upstream the rotor chamber via a pipe.
